

8/12/25 minutes

Attendance

Edward

Ethan

Spencer

Sunchoeh

Sandesh (client)

Sandesh has a stakeholder questionnaire that we will fill out after the meeting.

Edward asks questions

- Would the data be accessed constantly or maybe just once a week when they could reorder it
 - o Once a week should be fine

Going through Ethans wireframe diagrams. This was then shared to Sandesh for feedback.

Sunnys dataset time series – managed to make a prototype of a daily time series data visualisation system.

How many years' worth of synthetic data will we need to train the ai (capable of 20 years)

- 10 years initially but if not substantial enough then we will use 20

Sunny makes a kaggle account to share the code with Sandesh

Going through Trello to see how up to date we are with them

- All set different items on the Trello

Going through testing with spencer

- Research front end testing means
- Break whatever sunny and ethan make

System architecture

- Lucid chart
 - o Based off of aws
 - o Filtration process from the database to front end

- SPA
- User login

End of meeting
