

Test of Ethans Dashboard prototype

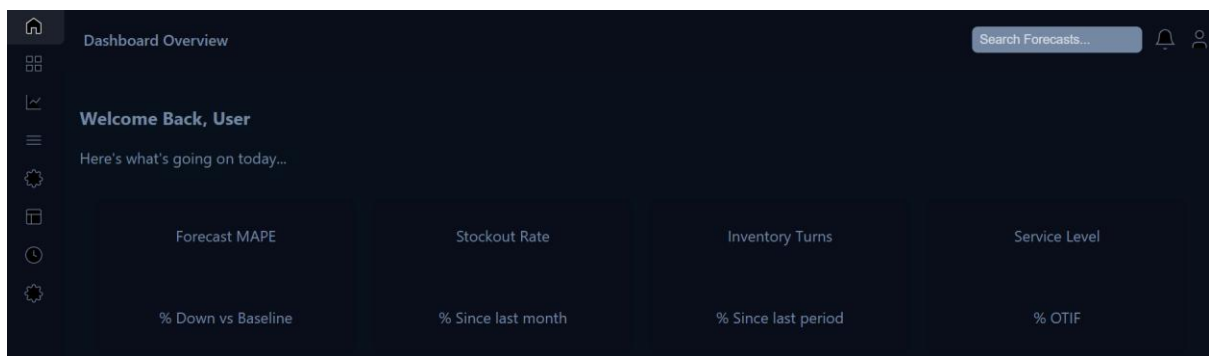

Here is the initial dashboard.

A few initial observations can be identified.

These include

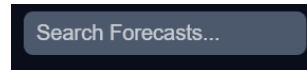

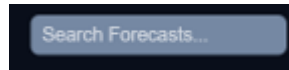

- Another identification is capitalization of the % down vs baseline
- The search bar colour really sticks out, a darker colour could suit it more and not be as prevalent

Of course because this is not yet connected to the backend, the functionality of the application cannot be tested, limiting tests.

Here I have changed some of the text within the buttons to match some capitalization standards

Regarding the search bar, I asked chat gpt for a midpoint between the current search bar colour (#8fa1bb), and the colour of the background of the application(#090e1a).

As a result, I was recommended the colour which can be seen on the right. seeing this then make me sure that it would definitely be more suitable as it sticks out less.

Overall, the rest of the application is fit for visuals, giving a sleek modern look.
