

2/2/26 minutes

Ethan
Sunny
Spencer
Ed

Client handover late April/ early may

Client feedback of the ui - very purple

Sunny to finish the model 9or 10/2/2026

Csv file to access the aws account which includes username and password

Lambda function for the prediction part?
Or using ec2 using sagemaker functions for different things.

Front end on cloudfront

Don't need a bigger dataset, but need a dataset to check if model is accurate

Backend we won't be using role based access control yet. Single access to see the prediction output

See if we can add any extra features to improve user experience.

Going to start somewhat early on the report.

GitHub repo on the teams chat for a front
